

Stop calling drivers to find out who's free.

Driver Scheduler puts availability, assignments, live tracking, and payroll hours on one board — so the schedule updates itself instead of you chasing it down.

A DISTRICT'S DAY ON DRIVER SCHEDULER

6:00 AM**Availability, set once**

Drivers mark open or blocked hours for the next three weeks — dispatchers see it instantly, no group text required.

9:15 AM**Conflicts caught automatically**

Double-bookings and declared unavailability are blocked the moment someone tries to assign them — not discovered at 6 a.m.

2:45 PM**A nudge before the wheels turn**

Drivers get a push notification minutes before their route starts — even with the app closed.

7:30 AM**Open shifts, claimed not chased**

An unfilled route shows up automatically. Any driver can claim it in one tap — no phone tree, no waiting on a callback.

12:30 PM**Every bus, live on the map**

Location sharing turns on by itself for a driver's scheduled window and off again after — nothing to remember to toggle.

4:00 PM**Hours that reconcile themselves**

Regular and overtime hours are computed from actual route times — one click exports a CSV straight to payroll.

Built for the bus, not bent to fit it

Route types, one-off field trips, and evening athletic runs are first-class — not a generic calendar app pressed into service.

Nothing to install, nothing to lose

Runs in any browser and installs like an app on a driver's phone. The schedule is never stale — there's nothing to sync.

Every change has a name on it

Role-based access for admins, dispatchers, and drivers, with a full audit log of who assigned, approved, or changed what.
